

Best value stocks available at cheaper rate today

Book value of a company is one of the most important factors while investing in a company. Book Value is Assets less Liabilities. The book value of a stock is the actual worth of the stock as in company books. how many shareholders and investor hold the stock of that company and how many believe with company.

In simple words book value is the actual value of the companies share on the basis of lot as Balance Sheet, I can also mention it as "True Value" & Market value of the stock is the price at which it quotes in the exchange's based on various factors.

Why Book value is so significant?

Book value gives me actual worth of the stock & eliminates the market sentiments, Let's take a practical example..I am sure that you will find many few companies running below it's book value

I will prove my point by putting a list of companies still running below Book Value and are hidden from the eyes of the investors.
